

```
#save and close

#Go to Windows wallet > tool > open wallet configuration file
rpcuser=xxxxxxxxxxxxx
rpcpassword=xxxxxxxxxxxxx
rpcport=12699
port=12698
rpccallowip=127.0.0.1
daemon=1
listen=1
server=1
# externalip required for collateral wallet vyigrat.conf
externalip=your_VPS_ip:12698
# for your second MN do same thing, etc
#externalip=your_VPS2_ip:12698

Exit wallet and open Wallet again

#go to Windows wallet > Masternodes > MyMasternodes
startmasternode all 0

#Go back each of your UBUNTU
vyigrat-cli masternode status

#you will get respond
# "message" : "Masternode successfully started"
# if failed #cek your colateral tx id and index
#unbuntu wallet should have up to date block
# make sure unbuntu not blok port12698
# Make sure you not fail start MN at Windows
```
